

Jump Cloud

Manage identities, access & devices from a single location to centralise your IT management needs. JumpCloud enables you to secure and control your organisation's activities from anywhere.

One Identity

Connect users to their devices, servers, networks, apps, & files in a secure manner, with JumpCloud serving as your authoritative directory or deferring to existing identity providers based on your needs.

Deploy resources

Feel empowered to secure, manage, and deploy resources that employees select as the best applications for their job, thanks to an open directory platform based on open standards.

Vendor Consolidation

With a centralised IT platform designed to manage & protect identities, access, & devices, you can unlock the potential in your people, processes, & current products.

Open Directory Platform

JumpCloud uses open protocols such as SAML, LDAP, RADIUS, and SCIM to connect and handle disparate resources from a single source.

Centralised Identity

JumpCloud's native, API-based integrations can be used to provision new user accounts or import and manage previously existing ones, resulting in centralised identity.

One-Click Mapping for Identity & Resources

You can provision varying degrees of access to all IT resources based on user group membership.
