25+ bn
Total Passwords

We help you act on data exposures by detecting when compromised employee and customer data may put your enterprise at risk.

30+ bn
Email Addresses

50+
Breach Sources
Collected Per Week

ENTERPRISE PROTECTION

A New & Better Way to Protect Your Enterprise
RADSPY's enterprise account takeover solutions are the missing piece in your security puzzle – the only solutions that put Recaptured Data at the forefront. RADSPY enables enterprises to quickly identify legitimate users vs. potential criminals using stolen information in order to prevent account takeover that leads to ransomware.

CONSUMER PROTECTION

A new way to protect your customers & your bottom line. RADSPY transforms recaptured data from breaches, malware-infected devices, and other underground sources to reveal insights about the identities of your customers – which are legitimate and which are potentially criminals using stolen data? This no longer has to be a guessing game.

Our insights let you take informed action to combat account takeover and online fraud, identify malware-infected consumers, preserve profits, and protect your brand reputation.

INVESTIGATIONS

Transform Your Investigations
Just like the rest of us, criminals rely on online accounts that are subject to data breaches. RADSPY accelerates investigations by making data recovered from those breaches actionable for investigators.

Drawing on billions of records recovered from third-party breaches, RADSPY enables investigators to piece together decades' worth of bad actors' digital breadcrumbs to unmask the identities of specific adversaries engaging in fraud and other criminal activities.

DATA PARTNERSHIPS

Offering product teams fast, easy access to the most comprehensive breach data available. Looking to build or enhance your solutions with breach data? RADSPY is your ideal partner. We specialize in the earliest possible recapture of data exposed in third-party breaches and malware infections, and offer product teams access to the world's most comprehensive and actionable repository of compromised credentials and PII.
